Siva Ganesh Golla

Java Full Stack Engineer | Spring Boot | Microservices | AWS
gsg1499@gmail.com • linkedin.com/in/ganeshg7 • github.com/sivaganesh1407

PROFESSIONAL SUMMARY

Java Full Stack Engineer with 5+ years delivering scalable enterprise applications across the full software development lifecycle—from technical design and specifications through secure implementation, automated testing, CI/CD, and production support. Proficient in Java, Spring Boot, microservices, REST APIs with OAuth2, JWT, and RBAC (Spring Security), React, Angular, and AWS. Applies DevSecOps-minded practices in build and release workflows and emphasizes code quality with JUnit and Mockito. Delivered cloud-native systems and modern web interfaces for financial and investment-adjacent services (retirement, insurance, asset management), energy, and automotive sectors. AWS Certified. Strong collaborator with cross-functional Agile teams (product, QA, DevOps/platform).

TECHNICAL SKILLS

Java, Spring Boot, Microservices, REST APIs, Spring Security (OAuth2, JWT, RBAC) | React, Angular | AWS, Docker, Kubernetes | CI/CD & DevSecOps practices (Jenkins, Bitbucket) | MySQL, PostgreSQL, MongoDB, Oracle | Kafka, RabbitMQ | JUnit, Mockito, Prometheus, Grafana

PROFESSIONAL EXPERIENCE

Java Full Stack Engineer – Mad Mobile

Nov 2025 – Present

- Engineered migration from legacy Spring MVC to Java 17 / Spring Boot microservices; owned technical design through deployment; reduced production incidents by 40% and deployment time from 2 hours to 15 minutes.
- Designed scalable, modular microservices architecture ensuring high availability, maintainability, and performance for enterprise applications.
- Built event-driven architecture with Redis, RabbitMQ, and Kafka; processed 10K+ transactions daily with 99.9% uptime; implemented retry and circuit breaker patterns for resiliency.
- Supported 500+ concurrent users with sub-200ms REST APIs using Spring Security and OAuth2; delivered responsive Angular and React UIs with Prometheus and Grafana monitoring.
- Automated regression and service-level testing with JUnit and Mockito; aligned test coverage with release criteria and defect KPIs.
- Partnered with DevOps on CI/CD automation (Jenkins, Bitbucket) to standardize build, scan, and deploy stages for repeatable, frequent releases.

Java Full Stack Engineer – Corebridge Financial

Feb 2025 – Oct 2025

- Developed Java / Spring Boot applications for retirement, life insurance, and asset management; engineered REST APIs with Hibernate for customer-facing and agent-facing portals and dashboards.
- Developed responsive user interfaces with Angular and React; implemented OAuth2, JWT, and Redis for secure authentication and session management; reduced data errors by 90%; improved API response time by 25%.
- Collaborated with DevOps on Docker and Kubernetes deployments; utilized AWS EC2, S3, RDS, and Lambda.
- Partnered with QA and Product teams in Agile ceremonies for requirement refinement; delivered 8+ features on schedule including policy management and claims processing.
- Contributed to technical specifications and API contracts for financial workflows; supported reviews with architecture and compliance stakeholders.
- Strengthened secure coding practices (input validation, least-privilege access patterns) within Spring Security; extended automated tests using JUnit and Mockito for critical policy and claims paths.
- Improved CI/CD pipelines for predictable deployments to cloud environments, reducing manual steps and supporting faster feedback from test to production.

Java Full Stack Engineer – ConocoPhillips

Feb 2024 – Dec 2024

- Implemented server-side logic with Java 11 and Spring Boot for portfolio and asset tracking; supported 500+ users and 10K+ daily transactions.
- Developed REST APIs with Spring Data JPA and Hibernate; built responsive UIs with React; reduced manual reporting time by 50%.
- Integrated Oracle and MySQL; developed CI/CD with Jenkins and Terraform; automated build-test-deploy stages; deployed on Kubernetes with health checks and auto-scaling.
- Documented service behavior and integration points to support operations and cross-team onboarding.
- Added and maintained automated tests (JUnit, Mockito) for core services to protect refactors and production stability.

Software Engineer – Infosys

Jun 2021 – Jun 2022

- Developed backend services with Java, Spring Boot, and REST APIs for vehicle manufacturing and supply chain analytics; integrated Oracle and PostgreSQL.
- Designed ETL workflows integrating vehicle production, dealer management, and logistics data; built backend processing for analytics and reporting.
- Optimized SQL queries for dashboards; improved query performance by 30%; reduced load times for 100+ users.
- Worked in Agile squads with analysts and QA to clarify acceptance criteria and ship incremental enhancements.

Associate Software Engineer – Elder Pharmaceuticals

Jun 2019 – May 2021

- Developed Spring Boot and Node.js backend services for production monitoring; built REST APIs for ERP integration with Oracle and PostgreSQL.
- Designed ETL workflows consolidating laboratory, quality control, and inventory data; built dashboards with AngularJS and React; reduced manual entry by 70%.
- Implemented data validation and SQL-based compliance reports; automated CI/CD with Jenkins and Maven.
- Applied validation and audit-friendly reporting patterns suitable for regulated operational data.

CERTIFICATIONS

- **AWS Certified DevOps Engineer – Professional** (March 2025 – March 2027)
- **AWS Certified Solutions Architect – Associate** (February 2025 – February 2028)
- **HashiCorp Certified: Terraform Associate** (March 2025 – March 2027)

EDUCATION

Master's Degree, Information Technology Management, Indiana Wesleyan University

Grade: 3.45/5. Coursework: Information Systems Management, Database Systems, Cloud Computing.

Bachelor's, Electrical, Electronics and Communications Engineering, Karunya Institute of Technology and Sciences

Grade: 7.2/10. Coursework: Communication Systems, Embedded Systems, Computer Engineering.

KEY PROJECTS

Retirement Investment Management Platform

- Designed and developed full-stack application using Spring Boot, JWT and role-based access, and React; deployed on AWS with Docker for retirement planning and portfolio management.
- Implemented REST APIs for authentication and portfolio tracking; integrated PostgreSQL and Redis for persistent storage and session management.

Smart Restaurant Platform

- Designed and developed full-stack platform with Spring Boot, React, and MySQL for menu management, order processing, inventory, and sales analytics.
- Built REST APIs for orders and inventory synchronization; delivered admin dashboard with React that reduced manual operations by 60%.

User Management Service

- Designed and developed REST API with Spring Boot, JPA, and H2; implemented JWT-based authentication and role-based access control with Spring Security.
- Implemented endpoints for registration, login, profile management, and audit logging.
