

Siva Ganesh Golla

Java Full Stack Engineer | Spring Boot | React | Angular | AWS
Tampa, FL, USA • gsg1499@gmail.com • linkedin.com/in/ganeshg7 • github.com/sivaganesh1407

PROFESSIONAL SUMMARY

Java Full Stack Engineer with 4+ years of professional experience: cloud-native architecture and distributed systems for retail/restaurant POS, insurance and retirement, energy, automotive supply chain, and pharma compliance. Delivers Java/Spring Boot microservices, REST APIs, React and Angular, AWS, Docker, Kubernetes, Jenkins/Bitbucket CI/CD, DevSecOps practices, and observability. AWS Certified DevOps Engineer – Professional; Solutions Architect – Associate; HashiCorp Terraform Associate. Available for C2C, contract, and W2 engagements.

TECHNICAL SKILLS

Backend: Java, Spring Boot, microservices, REST APIs, Spring Security (OAuth2, JWT, RBAC), Hibernate/JPA | Frontend: React, Angular, HTML5, CSS3, JavaScript, Bootstrap | Cloud & DevOps: AWS (EC2, S3, RDS, Lambda, ECS, ECR), Docker, Kubernetes, Jenkins, Bitbucket, CI/CD, DevSecOps, Terraform, Ansible, Maven, Git | Event-driven architecture & messaging: Kafka, RabbitMQ, Redis | Databases: Oracle, MySQL, PostgreSQL, MongoDB
Quality & observability: JUnit, Mockito, Selenium, Postman, Prometheus, Grafana, JIRA, Swagger

PROFESSIONAL EXPERIENCE

Client: Mad Mobile

Role: Java Full Stack Engineer | Duration: Nov 2025 – Present

- Spearheaded cloud-native migration from Spring MVC to Java 17 and Spring Boot microservices for retail and restaurant POS—cut production incidents 40% and deployment time from 2 hours to 15 minutes.
- Architected distributed, event-driven integration (Kafka, RabbitMQ, Redis) for 10K+ daily transactions at 99.9% availability with circuit breakers and retries for fault-tolerant order and payment flows.
- Engineered sub-200ms REST APIs with OAuth2, JWT, and RBAC (Spring Security) for 500+ concurrent users; delivered Angular and React UIs for peak-hour restaurant throughput.
- Led full-stack delivery (Spring Data JPA, Oracle, MongoDB, HTML5/CSS3/JavaScript) with Docker images and Kubernetes on AWS (EC2, ECS)—horizontally scalable systems aligned to 10K+ daily transaction volume.
- Optimized Jenkins and Bitbucket CI/CD with build, scan, and deploy gates and DevSecOps checks, promoting Docker workloads into production Kubernetes on the 15-minute release cadence.
- Delivered observability and resiliency via Prometheus, Grafana, and JUnit/Mockito gates tracking latency, errors, and defect KPIs against 500+ concurrent user traffic.

Client: Corebridge Financial

Role: Java Full Stack Engineer | Duration: Feb 2025 – Oct 2025

- Architected cloud-native Spring Boot microservices with Hibernate/JPA for insurance, retirement, and asset management—high-availability, distributed services behind customer and agent portals.
- Led Docker image lifecycle and Kubernetes releases on AWS (EC2, S3, RDS, Lambda) with OAuth2, JWT, Redis sessions, and RBAC for compliant financial traffic at enterprise scale.
- Optimized Angular and React (HTML5, CSS3, JavaScript) on Spring Boot APIs—cut data defects 90% and improved API response time 25% on policy and claims journeys.
- Led API contracts, technical specifications, and integration design with architecture and compliance—de-risking 8+ on-schedule policy, claims, and reporting deliveries.
- Delivered those features through Agile Product/QA partnership and Jenkins/Bitbucket CI/CD, shortening test-to-production feedback on each financial release.
- Engineered fault tolerance on monetary paths with JUnit and Mockito; used Prometheus and Grafana for production observability of latency and error budgets on critical services.

Client: ConocoPhillips

Role: Java Developer | Duration: Feb 2024 – Dec 2024

- Architected Java 11, Spring Boot, and Spring Data JPA services for oil and gas portfolio and asset tracking—500+ users, 10K+ daily transactions across distributed energy operations.
- Delivered React dashboards (HTML5, CSS3, JavaScript) on Spring Boot REST APIs, cutting manual reporting time 50% for field and office production and asset decisions.
- Optimized Terraform and Jenkins infrastructure-as-code pipelines, reducing environment provisioning time 60% for AWS-bound energy workloads.
- Engineered Kubernetes operations (health checks, readiness probes, auto-scaling) with Oracle and MySQL on AWS for fault-tolerant exchange of energy data at 10K+ daily transaction volume.
- Hardened REST contracts and integration documentation for interfaces supporting 500+ users and high-volume field reporting across upstream/downstream systems.

- Optimized regression safety with JUnit and Mockito on services underpinning 10K+ daily production and asset transactions before each production deploy.

Client: Infosys

Role: System Engineer | Duration: Jun 2021 – Jun 2022

- Architected distributed Java and Spring Boot REST services on Oracle and PostgreSQL for automotive manufacturing and supply-chain analytics across plants, dealers, and logistics networks.
- Optimized SQL and indexing for 30% faster queries, reducing dashboard latency for 100+ manufacturing, dealer, and logistics users on high-throughput analytics.
- Engineered resilient ETL from three core sources—vehicle production, dealer systems, and logistics—into analytics stores for batch and near-real-time, event-style reporting.
- Delivered contract-first REST layers with stable JSON and fault-tolerant error semantics for JavaScript KPI dashboards under concurrent analytics load.
- Implemented Java validation and reconciliation across plant and dealer feeds, improving downstream reporting reliability for analytics consumed by 100+ business users.
- Led a 12-month Agile cadence with analysts and QA, shipping increments with automated JUnit regression prior to each production analytics release.

Client: Elder Pharmaceuticals

Role: Associate System Engineer | Duration: Jun 2019 – May 2021

- Architected Spring Boot and Node.js REST services for production monitoring and ERP integration on Oracle and PostgreSQL—compliance-bound services in a regulated, distributed pharma environment.
- Spearheaded AngularJS and React dashboards (HTML5, CSS3, JavaScript) on secure APIs, cutting manual laboratory, QC, and inventory entry 70% and accelerating quality review cycles.
- Engineered ETL consolidating lab, QC, and inventory data into validated reporting models; delivered SQL compliance reports aligned to GxP-style controls across three regulated functional streams.
- Implemented RBAC-aware validation, audit trails, and reporting pipelines so manufacturing and quality could trace lineage across distributed sites after the 70% automation gain.
- Led Jenkins and Maven CI/CD with mandatory JUnit gates on compliance-critical builds before promotion to controlled environments.
- Delivered 24 months of incremental, audit-friendly releases with operations and quality—stabilizing regulated reporting and ERP integration cadence.

CERTIFICATIONS

- **AWS Certified DevOps Engineer – Professional** (March 2025 – March 2027)
- **AWS Certified Solutions Architect – Associate** (February 2025 – February 2028)
- **HashiCorp Certified: Terraform Associate (003)** (March 2025 – March 2027)

EDUCATION

Master's Degree, Information Technology Management, Indiana Wesleyan University

Grade: 3.45/5. Coursework: Information Systems Management, IT Infrastructure, Database Systems, Cloud Computing, Cybersecurity Fundamentals.

Bachelor's, Electrical, Electronics and Communications Engineering, Karunya Institute of Technology and Sciences

Grade: 7.2/10. Coursework: Communication Systems, Embedded Systems, Microprocessors, Digital Electronics, Computer Engineering. Active volunteer, National Service Scheme (NSS).

KEY PROJECTS

Retirement Investment Management Platform

- Delivered a cloud-native retirement and portfolio stack: Spring Boot, JWT with RBAC, React on AWS and Docker.
- Engineered REST APIs for authentication and portfolio tracking; PostgreSQL and Redis for persistence and sessions.

Smart Restaurant Platform

- Built Spring Boot, React, and MySQL flows for menus, orders, inventory, and sales analytics.
- Delivered REST APIs for orders and inventory sync; React admin UI that cut manual operations 60%.

User Management Service

- Implemented Spring Boot, JPA, and H2 with JWT authentication and RBAC using Spring Security.
- Delivered registration, login, profile, and audit logging endpoints.

Investment Portfolio Manager

- Delivered Spring Boot and React for asset tracking, performance views, and financial analytics.
- Engineered REST APIs for portfolio CRUD and metrics; dashboards with charts and updates.
