

Siva Ganesh Golla

Java Full Stack Engineer | React & Angular | Spring Boot | AWS Cloud
Tampa, FL, USA • gsg1499@gmail.com • linkedin.com/in/ganeshg7 • github.com/sivaganesh1407

PROFESSIONAL SUMMARY

Java Full Stack Engineer with 5+ years across the full SDLC: frontend (React, Angular, responsive UIs), backend (Java, Spring Boot, microservices, REST APIs, Spring Security, Hibernate/JPA), and cloud (AWS, Docker, Kubernetes, Terraform, CI/CD with Jenkins and Bitbucket). Current work includes restaurant technology and POS-related platforms; also delivered financial services, energy, automotive, and enterprise systems with strong testing (JUnit, Mockito) and observability (Prometheus, Grafana). AWS Certified DevOps Engineer – Professional, Solutions Architect – Associate, HashiCorp Terraform Associate. Available for C2C, contract, and W2 engagements.

TECHNICAL SKILLS

Frontend: React, Angular, HTML5, CSS3, Bootstrap, responsive UI, REST client integration | Backend: Java, JavaScript, Spring Boot, Spring MVC, Hibernate, REST APIs, microservices, Spring Security (OAuth2, JWT), JDBC | Cloud & DevOps: AWS (EC2, S3, RDS, Lambda, ECS, ECR), Docker, Kubernetes, Terraform, Ansible, Jenkins, Git, Bitbucket, Maven, CI/CD | Data & messaging: Oracle, MySQL, PostgreSQL, MongoDB, Redis, Kafka, RabbitMQ | Quality & tools: JUnit, Mockito, Selenium, Postman, JIRA, Swagger, Prometheus, Grafana

PROFESSIONAL EXPERIENCE

Client: Mad Mobile

Role: Java Full Stack Engineer | Duration: Nov 2025 – Present

- Migrated legacy Spring MVC to Java 17 / Spring Boot microservices for restaurant and POS platform features; owned technical design through deployment; reduced production incidents by 40%.
- Designed microservices for hospitality workloads—menus, orders, store or location data, and POS-related flows—with high availability, maintainability, and performance.
- Event-driven stack: Redis, RabbitMQ, Kafka; 10K+ transactions daily, 99.9% uptime; retry and circuit breaker patterns for order, payment, and partner integration events.
- Backend: Spring Data JPA with Oracle and MongoDB; sub-200ms REST APIs for 500+ concurrent users on restaurant staff and guest-facing experiences.
- Frontend: Angular and React with Spring Security and OAuth2-secured APIs (JSON/HTTP); responsive UIs for restaurant operations and digital ordering touchpoints.
- Cloud: AWS ECS and EC2, Docker, Kubernetes; Bitbucket-driven CI/CD; deployment time from 2 hours to 15 minutes for restaurant platform releases.
- CI/CD with Jenkins and Bitbucket: standardized build, scan, and deploy stages for repeatable delivery of hospitality services.
- Observability: Prometheus and Grafana for API latency, errors, and capacity tied to restaurant peak traffic and operational KPIs.
- Quality: JUnit and Mockito for regression and service-level tests on POS and restaurant-domain APIs; release gates tied to coverage and defect trends.

Client: Corebridge Financial

Role: Java Full Stack Engineer | Duration: Feb 2025 – Oct 2025

- Financial services: Java / Spring Boot for retirement, life insurance, and asset management; Hibernate-backed REST APIs for customer-facing and agent-facing portals and dashboards.
- Frontend: Angular and React with HTML5, CSS3, and Bootstrap; client- and server-side validation; reduced data errors by 90%.
- Backend performance: Spring Data JPA and PostgreSQL with connection pooling; improved API response time by 25% with reliable sub-200ms averages on key paths.
- Security: OAuth2, JWT, and Redis for authentication, authorization, and session caching under peak traffic.
- Secure coding with Spring Security: input validation and least-privilege access patterns for sensitive financial workflows.
- Cloud: Docker, Kubernetes, AWS EC2, S3, RDS, Lambda; partnered with DevOps for release hygiene and environment parity.
- Technical design: specifications and API contracts for policy, claims, and reporting; reviews with architecture and compliance stakeholders.
- CI/CD improvements for predictable cloud deployments, fewer manual steps, and faster feedback from test through production.
- Agile delivery with QA and Product: backlog refinement, acceptance criteria, demos; 8+ on-schedule features (policy management, claims, reporting).
- Quality: JUnit and Mockito for critical policy and claims paths to protect regressions in production.

Client: ConocoPhillips

Role: Java Full Stack Engineer | Duration: Feb 2024 – Dec 2024

- Backend: Java 11, Spring Boot, Spring Data JPA, Hibernate for portfolio calculations and asset tracking; 500+ users, 10K+ daily transactions.
- REST APIs enabling real-time exchange between React front end and Java services for operational dashboards.
- Full stack: responsive React UIs (HTML5, CSS3) for field operation dashboards and asset performance portals; manual reporting time reduced by 50%.
- Data layer: Oracle and MySQL integration; tuned SQL and persistence for reporting and transactional workloads.
- CI/CD: Jenkins pipelines with automated build-test-deploy; Terraform and Ansible for infrastructure as code; provisioning time reduced by 60%.
- Kubernetes: containerized services with health checks, readiness probes, and auto-scaling for variable load.
- WebSocket endpoints for live operational updates alongside REST for CRUD and batch-style operations.
- Documentation for service behavior and integration points; supported operations and cross-team onboarding.
- Quality: JUnit and Mockito for core services to stabilize refactors and production releases.

Client: Infosys

Role: System Engineer | Duration: Jun 2021 – Jun 2022

- Backend: Java, Spring Boot, REST APIs for vehicle manufacturing and supply chain analytics; Oracle and PostgreSQL for operational and analytics data stores.
- Designed ETL workflows integrating vehicle production, dealer management, and logistics sources; backend processing for batch and near-real-time ingestion.
- Built integration services between operational systems and analytics/reporting consumers; validation logic in Java for inventory and distribution data.
- SQL tuning for analytics and reporting workloads; indexing and query design; query performance up 30%; faster loads for 100+ dashboard users.
- REST APIs as the contract layer for internal reporting and analytics consumers; consistent error handling and payload standards.
- Partnered with analysts and QA in Agile squads: user stories, acceptance criteria, and incremental releases.
- Supported traceability from source systems through ETL to reporting outputs for supply-chain visibility.

Client: Elder Pharmaceuticals

Role: Associate System Engineer | Duration: Jun 2019 – May 2021

- Backend: Spring Boot and Node.js services for production monitoring; REST APIs for ERP integration and data exchange with Oracle and PostgreSQL.
- Frontend: AngularJS, React, and Bootstrap for inventory, laboratory, and production dashboards; manual data entry reduced by 70% via automated workflows.
- ETL pipelines consolidating laboratory, quality control, and inventory data from multiple sources into reporting-ready models.
- Data validation and SQL-based compliance reports aligned to pharmaceutical operational and audit expectations.
- CI/CD: Jenkins and Maven with JUnit for automated builds and regression checks prior to releases.
- Collaborated with operations and quality teams to refine reporting requirements and shorten feedback cycles on defects.
- Audit-friendly reporting patterns and controlled data handoffs suitable for regulated manufacturing data.

CERTIFICATIONS

- **AWS Certified DevOps Engineer – Professional** (March 2025 – March 2027)
- **AWS Certified Solutions Architect – Associate** (February 2025 – February 2028)
- **HashiCorp Certified: Terraform Associate (003)** (March 2025 – March 2027)

EDUCATION

Master's Degree, Information Technology Management, Indiana Wesleyan University

Grade: 3.45/5. Coursework: Information Systems Management, IT Infrastructure, Database Systems, Cloud Computing, Cybersecurity Fundamentals.

Bachelor's, Electrical, Electronics and Communications Engineering, Karunya Institute of Technology and Sciences

Grade: 7.2/10. Coursework: Communication Systems, Embedded Systems, Microprocessors, Digital Electronics, Computer Engineering. Active volunteer, National Service Scheme (NSS).

KEY PROJECTS

Retirement Investment Management Platform

- Full stack: Spring Boot, JWT auth, React; AWS and Docker for retirement and portfolio management.
- REST APIs for authentication and portfolio tracking; PostgreSQL and Redis.
- React UI: dashboards, portfolio views, transaction history; role-based access.

Smart Restaurant Platform

- Spring Boot, React, MySQL for menus, orders, inventory, and sales analytics.
- REST APIs for orders, inventory, and reporting; admin React dashboard; 60% less manual operations.

User Management Service

- Spring Boot, JPA, H2; JWT and RBAC with Spring Security.
- Registration, login, profiles, audit logging endpoints.

Investment Portfolio Manager

- Spring Boot and React for assets, performance tracking, and financial analytics.
- REST APIs for portfolio CRUD and metrics; dashboards with charts and updates.
