Siva Ganesh Golla

Java Full Stack Engineer | Spring Boot | React | Angular | AWS
gsg1499@gmail.com • github.com/sivaganesh1407 • linkedin.com/in/ganeshg7

PROFESSIONAL SUMMARY

Java Full Stack Engineer with 6+ years of professional experience:

Cloud-native architecture and distributed systems for retail/restaurant POS, insurance and retirement, energy, automotive supply chain, and pharma compliance. Delivers Java/Spring Boot microservices, REST APIs, React and Angular, AWS, Docker, Kubernetes, Jenkins/Bitbucket CI/CD, DevSecOps practices, and observability. Familiar with AI-assisted developer tools including GitHub Copilot and Cursor AI for development acceleration and documentation support. Available for C2C, contract, and W2 engagements.

TECHNICAL SKILLS

Backend: Java, Java 17, Spring Boot, microservices, REST APIs, Spring Security (OAuth2, JWT, RBAC), Hibernate/JPA | Frontend: React, Angular, HTML5, CSS3, JavaScript | Cloud & DevOps: AWS (EC2, S3, RDS, Lambda, ECS), Docker, Kubernetes, Jenkins, Bitbucket, CI/CD, DevSecOps, Terraform, infrastructure as code | Event-driven architecture & messaging: Kafka, RabbitMQ, Redis | Databases: Oracle, MySQL, PostgreSQL, MongoDB
Quality & observability: JUnit, Mockito, Prometheus, Grafana

PROFESSIONAL EXPERIENCE

Client: Mad Mobile

Role: Java Full Stack Engineer | Duration: Nov 2025 – Present

- Worked on Spring Boot microservices supporting high-volume checkout and kiosk flows across distributed retail environments.
- Collaborated on migration from Spring MVC to Java 17 and Spring Boot microservices for retail and restaurant POS; helped reduce deployment effort by ~25% and improve release stability.
- Participated in event-driven integration (Kafka, RabbitMQ, Redis) for 10K+ daily transactions with circuit breakers for resilient order and payment flows.
- Built REST APIs with OAuth2, JWT, and RBAC (Spring Security) for 500+ concurrent users; enhanced Angular and React UIs for peak-hour restaurant throughput.
- Supported Spring Data JPA, Oracle, and MongoDB with Docker and Kubernetes on AWS (EC2, ECS) for scalable POS services.
- Coordinated Jenkins and Bitbucket CI/CD with quality gates; extended observability with Prometheus, Grafana, and JUnit/Mockito.

Client: Corebridge Financial

Role: Java Full Stack Engineer | Duration: Feb 2025 – Oct 2025

- Collaborated on Spring Boot microservices with Hibernate/JPA for insurance, retirement, and asset management behind customer and agent portals.
- Supported Docker and Kubernetes releases on AWS (EC2, S3, RDS, Lambda) with OAuth2, JWT, Redis sessions, and RBAC for compliant financial workloads.
- Enhanced Angular and React (HTML5, CSS3, JavaScript) on Spring Boot APIs; improved API latency by ~20% and reduced data issues on policy and claims journeys.
- Coordinated API specifications and integrations with architecture and compliance partners; participated in on-schedule policy, claims, and reporting deliveries.
- Participated in Agile delivery with Product/QA and Jenkins/Bitbucket CI/CD, improving feedback from test to production.
- Extended fault-tolerance patterns with JUnit and Mockito; supported production observability with Prometheus and Grafana on critical services.

Client: ConocoPhillips

Role: Java Developer | Duration: Feb 2024 – Dec 2024

- Collaborated on Java 11, Spring Boot, and Spring Data JPA services for oil and gas portfolio and asset tracking for 500+ users and high daily transaction volume.
- Built React dashboards (HTML5, CSS3, JavaScript) on Spring Boot REST APIs; reduced reporting runtime by ~40% for field and office production decisions.
- Supported Terraform and Jenkins infrastructure-as-code pipelines; reduced environment provisioning effort by ~25% for AWS-bound workloads.
- Participated in Kubernetes operations (health checks, readiness probes, auto-scaling) with Oracle and MySQL on AWS for resilient energy data exchange.
- Enhanced REST contracts and integration documentation for interfaces supporting high-volume field reporting across

upstream/downstream systems.

- Extended regression safety with JUnit and Mockito before production deployments on production-critical services.

Client: Infosys

Role: System Engineer | Duration: Jun 2021 – Jun 2022

- Collaborated on Java and Spring Boot REST services on Oracle and PostgreSQL for automotive manufacturing and supply-chain analytics across plants, dealers, and logistics.
- Improved SQL and indexing for ~20% faster queries, reducing dashboard latency for 100+ manufacturing, dealer, and logistics users.
- Supported ETL from vehicle production, dealer systems, and logistics into analytics stores for batch and near-real-time reporting.
- Delivered contract-first REST layers with stable JSON for JavaScript KPI dashboards under concurrent load.
- Implemented validation and reconciliation across plant and dealer feeds, improving downstream reporting reliability for 100+ business users.
- Supported Jenkins CI/CD pipelines and coordinated deployments across lower environments while enforcing automated testing and release validation.
- Participated in Agile delivery with analysts and QA, using JUnit regression prior to production releases.

Client: Elder Pharmaceuticals

Role: Associate System Engineer | Duration: Jun 2019 – May 2021

- Collaborated on Spring Boot and Node.js REST services for production monitoring and ERP integration on Oracle and PostgreSQL in a regulated pharma environment.
- Supported AngularJS and React dashboards (HTML5, CSS3, JavaScript) on secure APIs; reduced manual laboratory, QC, and inventory entry effort by ~40% and accelerated quality reviews.
- Extended ETL consolidating lab, QC, and inventory data into validated reporting models; delivered SQL compliance reports aligned to GxP-style controls.
- Implemented RBAC-aware validation, audit trails, and reporting pipelines for traceability across distributed manufacturing and quality sites.
- Coordinated Jenkins and Maven CI/CD with mandatory JUnit gates on compliance-critical builds before promotion to controlled environments.
- Participated in incremental, audit-friendly releases with operations and quality over 24 months, stabilizing regulated reporting and ERP integration.

CERTIFICATIONS

- **AWS Certified DevOps Engineer – Professional** (March 2025 – March 2027)
- **AWS Certified Solutions Architect – Associate** (February 2025 – February 2028)
- **HashiCorp Terraform Associate** (March 2025 – March 2027)

EDUCATION

Master's Degree, Information Technology Management, Indiana Wesleyan University

2022 – 2024. Grade: 3.45/5. Coursework: Information Systems Management, Database Systems, Cloud Computing.

Bachelor's, Electrical, Electronics and Communications Engineering, Karunya Institute of Technology and Sciences

Grade: 7.2/10. Coursework: Communication Systems, Embedded Systems, Computer Engineering.

KEY PROJECTS

Retirement Investment Management Platform

- Delivered a cloud-native retirement and portfolio stack: Spring Boot, JWT with RBAC, React on AWS and Docker.
- Engineered REST APIs for authentication and portfolio tracking; PostgreSQL and Redis for persistence and sessions.

Smart Restaurant Platform

- Built Spring Boot, React, and MySQL flows for menus, orders, inventory, and sales analytics.
- Delivered REST APIs for orders and inventory sync; React admin UI that reduced manual operations by ~40%.

User Management Service

- Implemented Spring Boot, JPA, and H2 with JWT authentication and RBAC using Spring Security.
- Delivered registration, login, profile, and audit logging endpoints.

Investment Portfolio Manager

- Delivered Spring Boot and React for asset tracking, performance views, and financial analytics.
- Engineered REST APIs for portfolio CRUD and metrics; dashboards with charts and updates.
