

Siva Ganesh Golla

Java Full Stack Engineer | Spring Boot | React | Angular | AWS
Tampa, FL, USA • gsg1499@gmail.com • linkedin.com/in/ganeshg7 • github.com/sivaganesh1407

PROFESSIONAL SUMMARY

Java Full Stack Engineer with 5+ years owning the full SDLC across restaurant and retail technology, insurance and retirement, energy, automotive supply chain, and regulated pharma. Ships production Java/Spring Boot systems with modern web UIs, cloud deployments, and measurable reliability gains. AWS Certified DevOps Engineer – Professional, Solutions Architect – Associate; HashiCorp Terraform Associate. Available for C2C, contract, and W2 engagements.

TECHNICAL SKILLS

Backend: Java, Spring Boot, microservices, REST APIs, Spring Security (OAuth2, JWT, RBAC), Hibernate/JPA | Frontend: React, Angular, HTML5, CSS3, JavaScript, Bootstrap | Cloud & DevOps: AWS (EC2, S3, RDS, Lambda, ECS, ECR), Docker, Kubernetes, Jenkins, Bitbucket, CI/CD, DevSecOps, Terraform, Ansible, Maven, Git | Messaging & caching: Kafka, RabbitMQ, Redis | Databases: Oracle, MySQL, PostgreSQL, MongoDB
Quality & monitoring: JUnit, Mockito, Selenium, Postman, Prometheus, Grafana, JIRA, Swagger

PROFESSIONAL EXPERIENCE

Client: Mad Mobile

Role: Java Full Stack Engineer | Duration: Nov 2025 – Present

- Led migration from legacy Spring MVC to Java 17 and Spring Boot microservices for retail and restaurant POS and digital ordering, cutting production incidents 40% and deployment lead time from 2 hours to 15 minutes.
- Built an event-driven integration layer with Kafka, RabbitMQ, and Redis—10K+ daily transactions at 99.9% uptime—with retry and circuit breaker patterns for order, payment, and partner events.
- Delivered sub-200ms REST APIs with Spring Security (OAuth2, JWT, RBAC) for 500+ concurrent users; Angular and React for staff and guest experiences.
- Shipped menu, order, and location features end to end using Spring Data JPA with Oracle and MongoDB, HTML5/CSS3/JavaScript, and AWS (EC2, ECS) on Docker and Kubernetes.
- Automated Jenkins and Bitbucket pipelines with build, scan, and deploy gates for repeatable production releases of microservices.
- Tied JUnit and Mockito suites to release gates; used Prometheus and Grafana for latency, errors, and defect KPI visibility.

Client: Corebridge Financial

Role: Java Full Stack Engineer | Duration: Feb 2025 – Oct 2025

- Built Spring Boot microservices with Hibernate/JPA for insurance, retirement, and asset management, powering customer and agent portals.
- Deployed Docker and Kubernetes workloads on AWS (EC2, S3, RDS, Lambda) with OAuth2, JWT, Redis-backed sessions, and RBAC via Spring Security for regulatory-sensitive traffic.
- Cut data defects 90% and improved API response time 25% with Angular and React (HTML5, CSS3, JavaScript) on validated Spring Boot services for policy and claims.
- Authored API contracts and technical specifications; aligned integration design with architecture and compliance reviews.
- Shipped 8+ on-schedule features—policy management, claims, reporting—through Agile work with Product and QA and Jenkins/Bitbucket CI/CD.
- Protected policy and claims changes with JUnit and Mockito; monitored production health with Prometheus and Grafana.

Client: ConocoPhillips

Role: Java Full Stack Engineer | Duration: Feb 2024 – Dec 2024

- Built Java 11, Spring Boot, and Spring Data JPA services for oil and gas portfolio and asset tracking—500+ users and 10K+ daily transactions.
- Cut manual reporting time 50% with React dashboards (HTML5, CSS3, JavaScript) on Spring Boot APIs for field and office production and asset views.
- Cut environment provisioning time 60% using Terraform and Jenkins with infrastructure as code and repeatable delivery pipelines.
- Ran containerized services on Kubernetes (health checks, readiness probes, auto-scaling) with Oracle and MySQL on AWS.
- Published stable REST contracts for upstream/downstream energy consumers; documented integration points to speed operations handoffs.
- Expanded JUnit and Mockito coverage on core services to reduce regression risk on production releases.

Client: Infosys

Role: System Engineer | Duration: Jun 2021 – Jun 2022

- Developed Java and Spring Boot REST services on Oracle and PostgreSQL for automotive manufacturing and supply-chain

analytics across plants, dealers, and logistics.

- Improved query performance 30% through SQL tuning and indexing, reducing dashboard load times for 100+ users.
- Built ETL from vehicle production, dealer, and logistics sources into analytics stores for batch and near-real-time reporting.
- Defined contract-first REST APIs between operational systems and analytics; supported JavaScript KPI dashboards with stable JSON payloads and error handling.
- Encoded validation and reconciliation rules in Java so manufacturing, dealer, and logistics feeds stayed consistent for downstream reporting.
- Delivered incrementally over 12 months with analysts and QA, using automated JUnit regression before production analytics releases.

Client: Elder Pharmaceuticals

Role: Associate System Engineer | Duration: Jun 2019 – May 2021

- Built Spring Boot and Node.js REST services for production monitoring and ERP integration on Oracle and PostgreSQL under pharmaceutical compliance constraints.
- Lowered manual laboratory, QC, and inventory data entry 70% with AngularJS and React dashboards (HTML5, CSS3, JavaScript) on Spring Boot and Node APIs.
- Consolidated lab, QC, and inventory data through ETL into reporting models; produced SQL-based compliance reports aligned to GxP-style controls.
- Added RBAC-aware validation, audit trails, and reporting pipelines so quality and manufacturing could trace regulated data lineage.
- Automated Jenkins and Maven builds with JUnit gates before promoting compliance-critical services to controlled environments.
- Partnered with operations and quality for 24 months on incremental, audit-friendly releases of reporting and integration features.

CERTIFICATIONS

- **AWS Certified DevOps Engineer – Professional** (March 2025 – March 2027)
- **AWS Certified Solutions Architect – Associate** (February 2025 – February 2028)
- **HashiCorp Certified: Terraform Associate (003)** (March 2025 – March 2027)

EDUCATION

Master's Degree, Information Technology Management, Indiana Wesleyan University

Grade: 3.45/5. Coursework: Information Systems Management, IT Infrastructure, Database Systems, Cloud Computing, Cybersecurity Fundamentals.

Bachelor's, Electrical, Electronics and Communications Engineering, Karunya Institute of Technology and Sciences

Grade: 7.2/10. Coursework: Communication Systems, Embedded Systems, Microprocessors, Digital Electronics, Computer Engineering. Active volunteer, National Service Scheme (NSS).

KEY PROJECTS

Retirement Investment Management Platform

- Full stack: Spring Boot, JWT auth, React; AWS and Docker for retirement and portfolio management.
- REST APIs for authentication and portfolio tracking; PostgreSQL and Redis.
- React UI: dashboards, portfolio views, transaction history; role-based access.

Smart Restaurant Platform

- Spring Boot, React, MySQL for menus, orders, inventory, and sales analytics.
- REST APIs for orders, inventory, and reporting; admin React dashboard; 60% less manual operations.

User Management Service

- Spring Boot, JPA, H2; JWT and RBAC with Spring Security.
- Registration, login, profiles, audit logging endpoints.

Investment Portfolio Manager

- Spring Boot and React for assets, performance tracking, and financial analytics.
- REST APIs for portfolio CRUD and metrics; dashboards with charts and updates.
